

What are the various ways that are required to build India's Digital sovereignty?

Due to Russia and Ukraine war, America demanded its digital tech like MasterCard and America expect to stop their service in Russia which ended Russian internet economic activity as seen by dollar and rupee now die. This may happen to India if it is in the wrong side of these digital wars.

The only viable solution for India is to build its own digital giant which is Software as a Service SaaS with a hope of building dollar economy work.

They are nearly 4 major steps to assure India's digital sovereignty

First step: It is always the most ignored step is the reflection of technology. Cloud computing was the shift of SaaS but most ignored. eg: the speech of... in Mission of Delhi. But a few is enough to start a revolution.

Second stage: focuses on industrial strategies. ~~the~~ idea is useless without its application. This done by few hand...

Third stage: Government policy also plays an important role. Whether a government should involve itself or not to interfere itself a big question. ~~but~~ it can grant private innovation like BIRAC which led to success of Postaven Vaccines and lead the world

Fourth stage: Some times the recent industries need government support to protect it from tech giants. This is done even in U.S.A.

Conclusion: Indians hands are involved in building many Software tech across the world. We even have many talents both in mini Silicon Valley of India. If we tap this potential, we may lead the world in Software and other Software related tech.
