

Discusses implications of c on human health especially on mental health.

Climate change is showing its all manifestations in many forms. Human health is ~~the~~ one of the most affected due to climate change particularly mental health.

Implications on health

* Vector borne diseases such as dengue, Chikungunya, West Nile virus is on the rise.

* Air pollution causes breathing problems, heart and lung diseases.

* Water contamination leads to death by diarrhea.

* Heat stress in the sun impacts the mental health.

on mental health

Climate change is causing exhaustion, anxiety due to increase in temperature and also occurs. This negatively impacts relationships leading to suicides and divorces.

It affects the patients with mental conditions such as schizophrenia and Parkinson's disease. It causes hyperthermia leading to heat deaths.

Increased temperatures dysfunctions the hypothalamus which is responsible for homeostasis.

Impact of climate change is negative on mental health. Policies must be framed in order to counter stress of human and mental health.
