

A globally competitive tech-solution/application ecosystem can't be sustained without government partnership. In the context of India, analyse (200 words)

Introduction: India always welcomes the New technology with a note of "Make in India - Digital India" to mitigate the digital divide and to be self-reliant.

Government - technological solution partnership in India:

In the era of artificial intelligence, we are bound to the technology. Our government always boost the technological solutions and conduct hackathons.

- ① "Hack the Crisis" - Hackathon announced by the Niti Aayog to put an end to cyber crises during virtual meetings of government officials.
- ② Health: Andhra and Mumbai government has partnered with private techies to create Corona dashboard.
- ③ 'Aarogya Setu' app - Contact tracing during Covid 19
'Voice detector' - To diagnose Covid 19 in Mumbai
- ④ Education: A school in Kerala has come up with Virtual Learning (Augmented Reality - AR)

to make classes lively.

Digital books, online exams for students.

④ Agriculture: Artificial Intelligence based scheme
- Pradhan Mantri Fasal Bima Yojana to reduce
time consumption during crop cultivation.
E-NAM (National Agriculture Market) - electronic trading
portal for agricultural commodities.

⑤ Animal husbandry: 'Smart collar belt' for domestic
animals to analyse their health & track movement.

⑥ Transport: Electronic automobiles to reduce carbon emission

Conclusion: Government partners with technological
startup's to enrich all fields. The growth of
technological solutions without government support
resembles none growth in desert.
