

In order to manage the after effects of tropical cyclonic storms India must create a social safety net. Do you agree with this view?

- Tropical cyclones with moisture and high energy pose a serious threat ~~and~~ the damage caused by it is very.
- As of the "Global Climate Index" India ranks 7th in the worst affected countries in weather related events.
- The recent IPCC report suggests that due to climate change there will be a "increased proportion of tropical cyclones".

Damage caused

↳ Due to the cyclones the livelihood of people living in coastal areas along with their homes are getting damaged.

↳ There's a disturbance in scheduling and passage of train during that time.

↳ Roads & infrastructure (ie) buildings are getting affected.

Solutions required that can be implemented:

• As seen Odisha is more prone to cyclones and it is one of best states in tackling it. So "Odisha model" can be emphasised

↳ Robust warning & surveillance System

↳ Ready to go & strong Relief

Disaster relief forces

↳ Augment infrastructure that can handle cyclones

• Centre-State relation in context of Disaster management should be cooperative.

• Insurance scheme should be provided for the regions more prone to cyclone.

• Should develop & increase the capacity to store rain water which can ↓ flood.

• Concrete houses should be built for the people living near coastal regions.

• Finally, should ensure that the ~~relief~~ money provided for relief should be received by people affected fully & corruption shouldn't be entertained.
