

It is high time that the country should explore on world's first malaria vaccine. As per World Malaria Report nearly 229 million cases are reported out of which 4,09,000 deaths have been noticed. The decline in the cases are only in absolute terms.

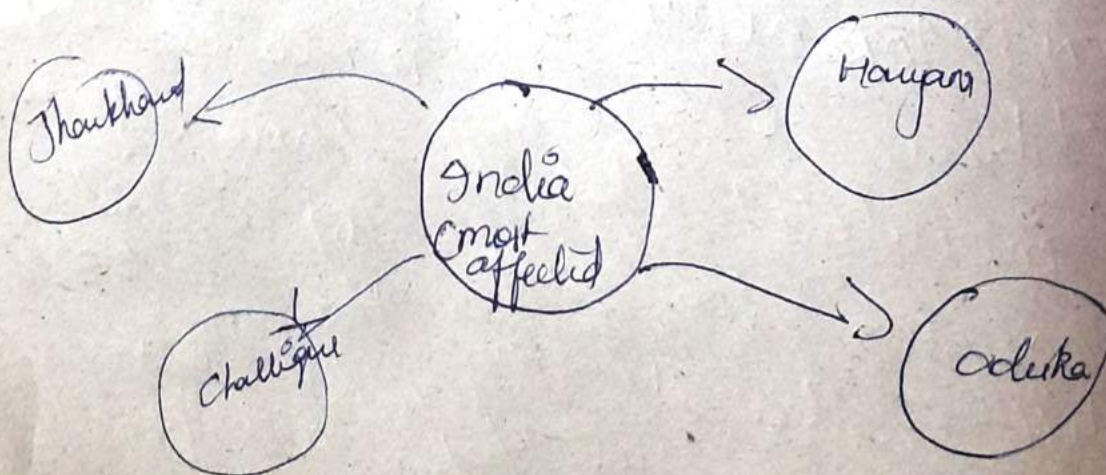

CHILDREN MORTALITY RATE: Nearly 50% children die due to malaria. Even the inoculated children show efficiency of ranging from 30% - 70%. Which still makes the fact that in order to improve efficiency antimalarial drugs are to be accompanied

② RESISTANCE TOWARDS ANTIMALARIAL DRUGS:
With the resistance towards antimalarial drugs including artemisinin is noticed
* RTS,S acts against the Plasmodium falciparum, the most virulent strains making the vaccine to be more efficient in prevention & cure as well as for cure.

③ AFFECTING OVER ALL AGE GROUPS:
* Even it affects all age group people 95% of world's population are affected by the most virulent parasite.

④ DECREASE IN IMMUNITY LEVEL: The more frequent attacks the more decrease in immunity level which making prone to many other diseases.

CONCLUSION:- The India is being flagged
as poor malaria detection country in 2017.
Both centre + state have to bring about
Vaccination efforts especially in this
Pandemic strikes economy as ~~so~~ by
repeated attacks people may become
more vulnerable to many pathogens
attacks.
