

2) The complexity and scale of the water crisis in India call for a locus-specific response. Discuss (200 words).

in India

In recent times, the ~~most~~ cities like Chennai, Hyderabad, Pune & Mumbai are heavily affected due to water crisis.

In Chennai the rainfall which is decreased 50%. In 2019 for summer it has occurred drought. This is due to lack of ground water in Chennai. In villages 70-85% of groundwater, in that 75% of water has been used for agricultural

purpose. In urban areas 40-50% of groundwater remaining water supply is by mining & lakes

* Due to less resources & larger population the water crisis has occurred. In Punjab 82% of land's groundwater gone to decline & in 25 years the Punjab is going to change in desert like structure. To verify the cause government has introduced Jal Jagan Sakti mission which would provide for every household in 2024. The government should take measures in water ~~the~~ crisis which mainly affects the cities due to over population. ~~So~~ This occurs due to more people ^{started to} ~~are~~ migrating towards cities which creates the demand for each and every ~~products~~ products like with increase price of food, water etc.. So these can be controlled by shifting the main centers of employment & education to other districts in the state which can reduce the migration.
