

The pandemic has provided a remarkable opportunity for the development of towns inclusively beside smart & cities. Elaborate.

Covid-19 pandemic has badly and badly impacted on the new development all around the world. In which smart cities development is also of them but in this situation countries also doesn't want to stop this but also initiating new ideas to building step in this way.

Some of the remarkable opportunity also makes by countries as follows:-

(i) Like other countries India also launched its 'Smart City Mission' to create 100 smart cities. Capex of urban local bodies and allocated 480 billion INR in its 2015 Union Budget for this purpose. This led to an upsurge in Indian academics.

(ii) India's smart cities are leveraging tech to help support the recovery from Covid-19.

(iii) A new paper paper Highlights Key findings on effective strategies that these cities deployed. These include encouraging data protection, hiring specializing experts and facilitating citizen outreach.

(iv) Cities should create technology management policies and strategies for ensuring standardization and interoperability by adopting strategies formulated by the Mission.

(v) The pandemic is also cited as driving change in how we think about city formation. For eg. in china, building plans for Net city include more sustainability measures such as green roof gardens, less infrastructure support for cars and use of A.I. in decision making.

(vi) Indian government funded smart cities mission, 45 cities have operational integrated command and control integrated centres.

(vii) South Korea provided one of the most successful demonstrations of the power of smart city technologies.

As we know that this pandemic obviously stop the working on new development but by collaboration with other countries with their technology we can also beat covid-19 and achieve our smart cities goal.
